

3-BUTTON SP RGB LIGHTING CONTROLLER

It appears that there is a separate cable that connects to the 3-button SP RGB Lighting Controller and the 3 buttons on the front panel of the Corsair 460X RGB case (see below). The end of the cable that has 3 2-pin connectors appears to be the end that connects to the front panel. Hopefully, these are just inserted into something at the front panel and can be easily removed (pulled out).
